

Base G-40

The G-40 base is designed for mounting 40, 4043 and 4046 model range detectors (e.g. DOR-40, DUR-4043) on a ceiling and for connecting detection lines to them. The base can be mounted in a PG-40 base attachment installed on suspension strands or in rooms where water vapour condensation is present on the ceiling. The base is equipped with an additional PG-7 sealing gland; this enables for it to become a suspended base. For mechanical protection of detector in the base is provided, made of steel wire, safety cover OZ-40.

Purpose:

The G-40 base is designed for install:

- 40, 4043, 4046 model range detectors
- ADC-4001M side line adapter
- ACR-4001 wireless detector adapter

PG-40 base attachment

Overview:

The G-40 base can be mounted in a PG-40 base attachment in order to:

- increase the resistance of base on water vapour condensation on the ceiling
- installed detectors on the supporting lines
- change G-40 base in a suspended base
